What do Canadian disability advocacy organizations need to know about the telecommunications industry?

The Big Issues in Less than 30 Seconds

- The Canadian telecommunications industry is going through **radical changes** caused by new technologies, deregulation, and increased competition.
- In the face of all these challenges, making their products and services accessible to people with disabilities **hasn't been high on the agenda** for most telecommunications companies.
- People with disabilities have a variety of **avenues to complain** about inaccessible telecommunications equipment and services.

The telecommunications industry is going through radical changes

- New technologies and deregulation are undermining the dominance of Bell Canada, Telus, and the other companies that used to have regional monopolies on phone service in Canada.

New Technologies

- Wireless cellular phones, "VoIP" Internet-based phone services, email, instant messaging, social networking websites like Facebook, and other new technologies provide consumers with attractive alternatives to conventional phone services.

Deregulation

- Deregulation has allowed many new companies to enter the telecommunications market and compete with the companies that used to have monopolies.
- Deregulation may be setting the stage for allowing foreign companies to compete with or even take over Canadian telecommunications companies.

On the Horizon

- New technologies and deregulation are leading to convergence of the formerly distinct telecommunications, broadcasting, and publishing/media industries.
 - A single company (Bell Canada Enterprises) owns Bell Canada, the CTV television network, and the Globe and Mail news/media company.
- The domestic ownership of Canadian telecommunications companies is in flux.

New technologies have the potential to make telecommunications more accessible

- Canada's telecommunications companies are pre-occupied with market shares and profits, exploiting new technologies, introducing new products and services, and outsmarting their competitors.
- In the face of these challenges, most companies haven't put making their products and services accessible to people with disabilities high on their agenda.

2008

- That won't change unless people with disabilities and their organizations, as well as governments, put pressure on the companies to treat accessibility as a priority.
 - Most of the accessibility features provided by Canadian telecommunications companies resulted from battles that began as complaints from consumers with disabilities.

Actions

- What should people with disabilities do when they have a problem with the accessibility of their phone, Internet, or other telecommunications services?
 - Start by contacting the company about the problem.
 - If the company doesn't resolve the problem to your satisfaction, file a complaint with the telecom industry's new Commissioner for Complaints for Telecommunication Services (CCTS)¹
 - If the Commissioner doesn't resolve the problem to your satisfaction, contact the CRTC.²
 - If you think your complaint concerns a *systemic* problem—a problem that affects other people with disabilities—contact the Canadian Human Rights Commission.³
- Tips:
 - Keep records of all the contacts you make to resolve the problem, including dates, who you contacted (including phone numbers, e-mail addresses, etc.), the responses you got, etc.
